

PLANT NEWS

Ingeniero White, July 21, 2023. – Profertil informs that on Monday, July 24, a turnaround of the plant will begin. Its purpose is to conduct maintenance tasks to ensure the company's own reliability standards. The work will last approximately 22 days.

As usual in this type of tasks, during the initial stage of the work when the plant is actually shut down, there will be a greater luminosity in the flares as a result of the controlled combustion of the process gases that remain in the equipment. It is important to note that this presents no risk to the community or the environment; it is a standard procedure worldwide for delivering equipment safely. In the attached video clip, you can see how this equipment works:

During the plant shutdown period, maintenance tasks will be carried out, some of which will continue during the night periods. All of them have the safety of people and the care of the environment as priorities.

The contact channels for any concerns that may arise are the usual ones, both through the company's website (www.profertil.com.ar) and through social networks, where the company is listed as @profertilagro.
